

Back to Life

Courses in Emergency Care and First Aid

Protecting and Saving Lives

Human Factors

Overview

Achieving a successful outcome in a critical incident is dependant not only upon good psychomotor skills, but also the human factors that allow a group of rescuers to work in a considerate, efficient and effective team.

This enjoyable and engaging training course consists of simulation, workshops, open discussion and interactive lectures in all aspects of human factors.

The aim of the day is to help the students gain awareness and insight as to how human factors can influence the outcome of a situation both managerially and clinically, and provide opportunities to discuss how to influence their own behaviours to improve care.

Course Contents

- Team working
- Leadership
- Situation Awareness
- Communication with Active listening
- Task allocation
- Changing the culture

Type Of Training: Theory and practice

Number of Candidates (per trainer): 6
